

GigaOm Radar Report Names Cobalt Leader for Penetration Testing as a Service

Cobalt is the **only** “outperformer” in an independent research report from GigaOm on Pentesting as a Service.

Here's what GigaOm had to say about Cobalt:

“[Cobalt] capitalizes on its extensive PtaaS experience and rapid development of new features to deliver a solution that is both simple to use and incredibly effective.”

GIGAOM

Cobalt scored as “exceptional” in its ability to meet the needs of both SMB and Enterprise segments. The Radar report also gave Cobalt top marks in key areas including feature set, risk reduction, and speed.

Our standing as the category leader was driven by the flexibility of our credit model, the strength of our automation, the value-add of our professional services, the fact that we offer free retesting, and the speed with which tests launch thanks to the size of the Cobalt Core – our community of vetted, skilled testers who are available on demand.

View the full reports to learn why GigaOm declares that “PtaaS represents the revolution in the pentesting space that was long overdue,” and why Cobalt leads the pack.
